

BUSINESS ACCESS

Business Products

All-In-One-Box for business customers

VDSL2 Bonding
Fiber
SHDSL
Mobile Backhaul
NGN

One more step towards ultimate flexibility and future proof business – with the product series Business Products. Broadband Intelligent Gateways (BIG) for carrier class solutions open you a wide range of new opportunities for business and connectivity in a permanent growing and fast changing world of access. Be a part of the future and be independent – either using existing copper structures or looking forward to NGN fiber applications.

The BIG series is the perfect solution for data applications in the Metro Ethernet, for internet cloud services, such as web-based storage applications, the connection of external locations to a central office by setting up virtual local area networks (VLAN), as well as for prioritized voice and video services. Furthermore, the products are optimized for the connection of eNodeB-base stations with extremely low latency requirements, clock pulse and phase synchronization of the base stations.

BUSINESS ACCESS

Characteristics and Benefits

- Flexible and highly available solutions for voice and data communication over IP-based networks
- Connection of business and corporate customers having high symmetrical bandwidth demands
- Support of Carrier Class Services with guaranteed superior class of services
- Use of deployed copper cable infrastructure and future proof fiber networks
- Range extension to reach customers in distant areas (fully remote-fed)
- All-In-One Business IAD's with different interfaces (POTS, ISDN, WLAN etc.)
